The laboratory grown damond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown damond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a chemical product). This is a manufactured (man-mode) diamond produced by CVD (chemical vopor deposition) or by HPHT (righ pressure high temperature) growth processes and may include post-growth treatments to after the color LGL employs and utilizes those techniques and equipment currently available to GSL, including, without limitation. 10X magnification, corrected friplet laupe, binacular microscope, master color comparison stones, non-contact-optical measuring devices, Spectraphotometer and such other instruments and/or processes as deemed appropriate by IGI. In the case where diamond melies is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory created origin will be performed. This Report includes advanced security features A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarify and carat weight.
