This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Lasarcshoel's by international Gemological Institute (G). A IGO has essentially the chemical physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HH/I (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, binous excitation wavelengths: This Report Includes advanced security features. This Report a naivis at various excitation wavelengths: This Report Includes advanced security features. This Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not agree to purchase or replace the online.
