This Laboratory Grown Diamond (IGD) described in this Report has been analyzed, graded and Lassracthed® by International Gemological Institute (IGN A IGE has essentially the chemical, physical and optical properties as a mixed alarmand, with the exception of being man-made (a manufactured product). IGD's are hypically produced by CVD (chemical vapor deposition) or by HHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, binocular microscopes Laborand color maters, non-contact-optical measuring device, a wide range analytical techniques including FITE. UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation avaelingths. This Report includes advanced security features. The Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not agree to purchase or replace the article.
