This laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Lasersched® by International Gemological Institute (GR). A LGD has assentiable the chemical physical and aptical properties as a mined diamond, with the exception of being mammade (a manufactured product). LGD are hypically produced by CVC (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth madifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, bincular microscopes, diamond color masters, non-contract-optical measuing device, a wide range analytical techniques including FIIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. The Report is neither a guarantee, valuation nor approide and by making the report IG does not agree to purchase or replace the article.
