Comments: This Laboratory grown diamond was created by high pressure high temperature process (HPHT) Type II

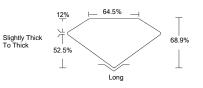

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Generological Institute (GI), A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical wapor deposition) or by HPHT (fingh pressure high temporature) growth processes and may include post growth modifications to change the color. Icil utilizes the most advanced techniques and equipment currently variable including, binocular microscopes, diamond color masters, non-contact-optical messuring device, a wide range analytical techniques including FTIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced sectors corpy, and fluorescence analysis at guarantee, valuation nor appraisal and by making the report IGI de UMENTINAL GEMOLOGICAL INSTITUTE, INC
