IGI LABORATORY GROWN DIAMOND IDENTIFICATION REPORT

Comments: As Grown - No indication of post-growth treatment. This Laboratory Grown Diamond was created by High Pressure High Temperature (HPHT) growth process. Type II

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® yo International Gemological Institute (IG). I LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including. Disocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIR, UV-1/S-NR, UV-16-NR, UV-16-SNR, and Statutes and these respleces were than available including of the upper lacides advanced security features. This Report is nativer a gurantee, valuation nor appraviable and by making the report IG does not dage to pauches or replace the article.
