This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed[®] by International Gemological Institute (GN). A LGD has essentially the chemical physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high Leus are typically produced by CVU (chemical voppr deposition) or by HHT (high pressule high temperature) growth processes and may include post growth modifications to change the color. (IG fulfizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contoct-optical messing device, a wide range analytical techniques including. FTIR, UV-UIS-NIR, criman spectroscopy, and fluorescene analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not garee to purchase or replace the article.
