This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological Institute (IGI). ALC Dha se sesnitally the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high ressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including, binocular microscopes diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FTIR, UV-XIS-MIR, raman spectroscopy, and fluorescence analysis at various excitation vavelengths. This Report includes advanced security features. This Company is petitive to the process of the process
