This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological Institute (IG). A LGD has essentially the chemical, physical and optical properties as a mined aliamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. (Gl utilizes the mast advanced techniques and equipment currently available including, binocular microscopes, diamond color maters, non-contact-optical measuing device, a wide range analytical techniques including FIR, UV-VIS-NIR, ramon spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report Includes advanced security features. This Report Is neither a guarantee, valuation nor approxisal and by making the report IGI does not agree to putches or teplace the anticle.
