The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (1.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to alter the color. I.G.I. employs and utilizes those and may include polydywin realiments of an ine the cuto, tax employs and anices indee techniques and equipment currently available to IGL, including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, marter color comparison stones, non-contact-optical measuing device, Spectraphotometer and such other instruments and/or processes as deemed appropriate by IGL In the case where diamond melee is set in anci/or processes as deemed appropriate by lost in the case where darinona meeters is in a a mounting, a random testing procedure, regarding the aliamonds being of natural of laboratory created origin will be performed. This Report includes advanced security features. A duly accreated agenologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, claitly and card weight. THIS REPORT IS NEITHER A GUARANTEE, VALUATION, NOR APPRAISAL OF THE GEMSTONE
