This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and casetscribed® by International Gemological Institute (G)). A LGD has essentially the chemical, physical and optical properties as a mined alamond, with the exception of being man-made (a manufactured product). LGO's are typically produced by C/D (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. [G] utilizes the most advanced techniques and equipment currently variable including, binocular microscopes, diamond color meters, non-contact-optical measuring device, a wide range analytical techniques excitation and color materia.
