This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscitade⁹ by International Gemological Initiute (IG). A LGO has sessifially the chemical, physical and aplical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPIT (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including. Disocular microscopes, alamond color masters, non-contoct-optical measuing device, a wide range analytical techniques including FITI, UV-VIS-NIR, Uv-man spectroscopy, and fluorescence analysis at various excitation availangths. This Report Includes advanced security features. This Report is neither a guarantee, valuation or appraisal and by making the report IGI does not agree to purchase or replace the articles.
