This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological Institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes temperature glowin processes and may include par growin modifications of charge me could nor anizes the most advanced techniques and equipment currently varilable including, binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analysitat terrativas excitations including TRR, UV-VIS-NIR, raman spectracopy, and fluorescence analysis at various excitations wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not garee to purchase or replace the article.
