The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the some chemical, physical and optical properties as a mined alamond, with the exception of being grown by mon (a manufactured product). This is a manufactured (mon-made) alamond produced by CVD (chemical vopor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to after the color. IGL employs and utilizes those techniques and equipment currently available to IGJ, including, without limitation, 10X magnification, corrected trighet lauge. Bincular microscope, matter color composition stores, non-contract-optical measuring device, Spectraphotometer and such other instruments and/or processes at deemed appropriate by IGL in the case where diamond melee is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory credited generalist or and wells. No advect wells wells in A duly accelted generalist or Junk Report includes advanced security features and harrevelationarity between cut, color, clainty and card weight. **INS EXPORT INSTREX AURADINN (NG APPRAISAL OF THE CENSONE**
