This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laesscribed's py International Germological Intitut (LGD). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being mon-mode (a manufactured product). LGDs are hyplically produced by CVD (chemical vapor deposition) or by IHHF (high pressure high temperature) growth processes and may include post growth modifications to change the color. Glutillizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters non-contact-optical measuring device, a wide range analytical techniques including. FIIR, UV-VIS-NIB, craman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor approxisal and by malking the report (ISI does not gare to such see refere the article.
