This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological Institute (GN). A LGD has essentially the chemical, physical and aptical properties as a mined aliamond, with the exception of being marm-rade (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by IHPIT (high pressure high temperature) growth processes and may include post growth modifications to change the coinc. (Id fullizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contect-optical measuring device, a wide range analytical techniques including FIIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation nor approlisal and by making the report IGI does not agree to purchase or replace the article.
