This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological Institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured praduct). LGD's are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. (GI utilizes the most advanced techniques and equipment currently available including, Dinocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including. FIIR, UV-US-NIR, UV-VIS-NIR, runna spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation or aparalisal and by making the report (GI does not daree to partures for shores or tenjoces the article.
