IGUA ABORATORY GROWN DIAMOND IDENTIFICATION REPORT

Comments: As Grown - No indication of post-growth treatment. This Laboratory Grown Diamond was created by High Pressure High Temperature (HPHT) growth process. Type II

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed<sup>®</sup> by international Geromlogical Initiute (GD). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPH (high pressure high temperature) growth processes and may include post growth modifications to change the color. (Gl utilizes the most advanced techniques and equipment currently available including. Iniccular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIR, UV-18-NIR, UV-18-NIR
