The left diagram shows a circle with a square inscribed inside it. The square is rotated 45 degrees. The circle is divided into 16 equal sectors by 16 radial lines. The square is further divided into 16 smaller triangles by 16 lines connecting the midpoints of its sides to the vertices of the circle. The right diagram shows the same circle with the same radial lines, but the square is now a 16-pointed star. The star is formed by 16 triangles, each with a vertex at the center of the circle and a base on the circle's circumference. The star is labeled with letters A through P, with A at the top and P at the bottom.

Red symbols indicate internal characteristics.
Green symbols indicate external characteristics.

The laboratory growdiamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a naturally occurring diamond. The production of a grown diamond is a manufacturing process. I.G.I. employs and utilizes those techniques and equipment currently available to I.G.I., including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact optical spectrometer, and/or other instruments and/or processes as deemed appropriate by I.G.I. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.

THIS REPORT IS NEITHER A GUARANTEE, VALUATION, NOR APPRAISAL OF THE GEMSTONE DESCRIBED HEREIN. PLEASE REVIEW THE LIMITATIONS AND RESTRICTIONS SET FORTH ONLINE. FOR MORE INFORMATION, PLEASE VISIT WWW.IGI.ORG OR CALL 1-888-BUY-IGI.
