This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Loserscitade<sup>9</sup> by International Gernological Initiute (LG). A LGO has essentially the chemical, physical and aprical properties as a mined atomand, with the exception of being man-made (a manufactured praduct). LGD's are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. [GI utilizes the most advanced techniques and equipment currently available including. Disocular microscopes, atlamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIIR, UV-VIS-NIR, Uv-man spectroscopy, and fluorescence analysis at various excitation available. This Report Includes advanced security features. This Report is neither a guarantee, valuation or oppravisal and by making the report [GI does not age to partness or replace the articles.
