of post-growth treatment.	
This Laboratory Grown Diamond was created by High Pressure High	
Temperature (HPI Type II	HT) growth process.

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed[®] by International Gemological Institute (IG). A LGD has essentially the chemical, physical and optical properties as a mimed diamond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPII (high pressure high temperature) growth processes and may include post growth modifications to change the color. (GI utilizes the most advanced techniques and equipment currently available including, bincular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques excitation including FIII, UV-VIS-NIE, UV-man Spectroscopy, and fluorescence analysis at various excitation

wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation

nor appraisal and by making the report IGI does not garee to purchase or replace the article.

Comments: As Grown - No indication of post-growth treatment.
