This Laboratory Grown Diamond (IGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological institute (IGI) A IGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being mon-made (a manufactured product). ICD's are typically produced by CVD (chemical vapor deposition) or by HPHI (high pressure high temperature) growth processes and may include post growth modifications to change the color. (GI utilizes the most advanced techniques and equipment currently available including, binocular microscopes, alamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIR, UV-VIS-NR, UV-mans spectroscopy, and fluorescence analysis at various excitation avarantegrafts. This Report Includes advanced security features. This Report is neither a guarantee, valuation or aparasial and by making the report (GI does not agree to partures the articles.

Comments: As Grown - No indication of post-growth treatment.
