This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Lasescribed® by International Gemological institute (GN). A LGD has essentially the chemical, physical and optical properties as a mined almond, with the exception of being mam-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. (I allilizes the mean color context, and and provide post growth modifications to change the color. (I allilizes the most color context, and experimentary and the color context and the post of the color context and including. THE, UV-15-NIT, and spectracopy, and fluorescence analysis at various excitation wavelengths. This Report Includes advanced security features. This Report is neither a gurantee, valuation or aparisation and by marking the report (B) does not darge to post the articles.
