of post-growth treatment.		
This Laboratory Grown Diamond was created by High Pressure High Temperature (HPHT) growth process.		
Type II		

This Laboratory Grawn Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological Intitlute (IG). A LGD has essentially the chemical, physical and optical properties as a mixed alianond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) gravith processes and may include post gravith madifications to change the color. (Gi utilizes the most advanced techniques and equipment currently available including, binocular microscopes, including FTIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report Includes advanced security features. This Report is netter a quarantee, valuation

nor appraisal and by making the report IGI does not agree to purchase or replace the article. INTERNATIONAL GEMOLOGICAL INSTITUTE. INC
