Temperature (HPHT) growth process. Type II		

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by international Gemological Institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mined diamonal, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth madifications to change the color. IGI utilizes the mast advanced techniques and equipment currently available including, binocutar microscopes,

Comments: As Grown - No indication of post-growth treatment.

This Laboratory Grown Diamond was created by High Pressure High

the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIIR, UV-US-NIE, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report Includes advanced security features. This Report is neither a guarantee, valuation nor approisal and by making the report IGI does not agree to putchase or replace the article.
