of post-growth treatment.		
This Laboratory Grown Diamond was created by High Pressure High Temperature (HPHT) growth process.		
Type II		

This Laboratory Grawn Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological institute (GI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a monufactured product). LGD's and typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) grawth processes and may include post grawth madifications to change the color. (GI utilizes the mast advanced techniques and equipment currently available including, binocular microscopes,

Comments: As Grown - No indication of post-growth treatment.

This Laboratory Grown Diamond was created by High Pressure High

the most advanced techniques and equipment currently available including, binocular microscopes, diamand color masters, non-contact-optical measuring device, a wide range analytical techniques including FIR, UV-US-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor approvide and by making the report (B) does not agree to autochase or replaces the article.
