of post-growth treatment.		
This Laboratory Grown Diamond was created by High Pressure High Temperature (HPHT) growth process. Type II		

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscited® by International Gemological Institute (IG). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured praduct). LGDs are hypically produced by CVD (chemical vapor deposition) or by HPII (high pressure high temperature) growth processes and may include post growth modifications to change the color. (Gi utilizes the most advanced techniques and equipment currently variable including, binocutar microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIII, UV-VIS-NIR, Uv-man spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report Includes advanced security features. This Report is neither a guarantee, valuation nor aparasida and by making the report (Gi does not agrae to parate the articles.
