This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laescribed® by International Gemological Institute (GR). A LGD has essentially the chemical physical optical properties as a mined diamond, with the exception of being mani-made (a manufactured product). LGDs are typically produced by CVD International typor deposition) or by HHH (high pessure high produced by CVD International Proporties on the HHH (high pessure high the most downced techniques and equipment currently available including binocular microscopes, damand color masters, non-contact-patical measuring device, a wide range analytical techniques including. FIRI, IUV-VIS-NIC, arman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features.
