This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Genological Institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high Leurs are ryboculy produced by CVC chemical robust deposition) or by him mining pressule high temperature growth processes and may include post growth modifications to change the color. IG thilizes the most advanced techniques and equipment currently available including, binocular microscopes, alamond color matters, non-contoct-optical measuring device, a wide range analytical techniques including TIR, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not garee to purchase or replace the article.
