Type II This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed® by International Gemological Institute (IGI). A LGD has essentially the chemical, physical and aptical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high

captical properties as a mined atomined, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HHI (high pressure high temperature) growth processes and may include post growth madifications to change the color. Glo utilizes the most advanced techniques and equipment currently available including. binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FHI, UV-UIS-NH, ruman spectroscopy, and fluorescence analysis at various excitation wavelengths.
