The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or incribed by international Gemological institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical physical and optical properties as a mined diamond, with the exception of being grown by mon (a manufactured product). This is a manufactured (man-made) diamond produced by CVD (chemical vopor deposition) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to after the cold. IGL employs and utilizes those techniques and equipment currently available to IGL, including, without limitation, 10X magnification, correct-optical implet physical in the cost of the same color comparison stones, non-contact-optical measuring device. Spectraphotometer and such other instruments and/or processes a deemed appropriate by IGL in the case where diamond being of natural of laboratory created triplet loogit or generative, regarding the diamonds being or nature of laboratory created origin will be performed. This Report includes advanced security features and will resolve to the importance of and interrelationship between cut, color, clarity and acat weight.

THIS REPORT IS NEITHER A GUARANTEE, VALUATION, NOR APPRAISAL OF THE GEMSTONE DESCRIBED HEREIN. PLASE REVIEW THE LIMITATIONS AND RESTRICTIONS SET FORTH ONLINE. FOR ADDITIONAL INFORMATION, IMPORTANT LIMITATIONS AND DISCLAIMERS, PLEASE GO TO WWW.IGI.ORG/TEMNS.HTML. OR CALL 1-888-BUY-GIS.
