This technical diagram illustrates the proportions of a diamond. It features a central line drawing of a diamond with various facets labeled. To the left of the diamond, two vertical dimension lines indicate the table width (15%) and the crown height (43%). Above the diamond, a horizontal dimension line indicates the table diameter (58.5%). To the right, two vertical dimension lines indicate the crown height (36.0°) and the pavilion height (40.8°). A vertical dimension line on the far right indicates the total height (62.3%). The text 'Medium To Slightly Thick (Faceted)' is positioned to the left of the diamond, and 'Pointed' is at the bottom.

Red symbols indicate internal characteristics.
Green symbols indicate external characteristics.

The laboratory growdiamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (I.G.I.). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a naturally occurring diamond. The production of a grown diamond is a manufacturing process. I.G.I. employs and utilizes those techniques and equipment currently available to I.G.I., including, without limitation, 10X magnification, corrected triplet loupe, binocular microscope, master color comparison stones, non-contact optical spectrometer, and/or other instruments and/or processes as deemed appropriate by I.G.I. This Report includes advanced security features. A duly accredited gemologist or jeweler can advise you with respect to the importance of and interrelationship between cut, color, clarity and carat weight.

THIS REPORT IS NEITHER A GUARANTEE, VALUATION, NOR APPRAISAL OF THE GEMSTONE DESCRIBED HEREIN. PLEASE REVIEW THE LIMITATIONS AND RESTRICTIONS SET FORTH ONLINE. FOR MORE INFORMATION, PLEASE VISIT WWW.IGI.ORG OR CALL 1-888-BUY-IGI.
