Comments: As Grown - No indication of post-growth treatment.

This Laboratory Grown Diamond was created by High Pressure High

Temperature (HPHT) growth process.

Type II

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laesacribed's py International Germalogical Intitud (GIO). A LGO has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being mon-mode (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by IHPH (high pressure high temperature) growth processes and may include post growth modifications to change the color. Glutillizes the most advanced techniques and equipment currently available including. binocular microscopes, diamond color masters non-contact-optical measuring device, a wide range analytical techniques including. FIIR, UV-VIS-NIIC, mans spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor appraisal and by marking the report (GI does not gare to a various excitation and production and by marking the report (GI does not gare to a various excitation and production and by marking the report (GI does not gare to a various excitation and production for appraisal and by marking the report (GI does not gare to a various excitation and production for appraisal and by marking the report (GI does not gare to auctions or response to the article.
