This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Loserscited® yo International Gernological Institute (IG). A LGD has essentially the chemical, physical and aplical properties as a mined atomond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. (IG utilizes the most advanced techniques and equipment currently available including. Disocular microscopes, alamond color masters, non-contact-ophical measuring device, a wide range analytical techniques including FIIR, UV-VIS-NIR, UV-range stratement currently available including strates activation wavelengths.
