Inis Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscined® by International Gemological Inthite (LGD). ALGO has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being mon-made (a manufactured product). LGDs are typically produced by CVD (chemical vippor deposition) or by IHHI (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently variables including. binocular microscopes, diamond color masters, non-contact-patical measuring device, a wide range analytical techniques including. Fill, UV-VIS-NIC, arman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor approxisal and by making the report list does not gare to suchose or resolate the article.
