This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laseracited's by international Gemological Institute (IGD). A IGD has sestratively the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. Isld utilizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical fechniques including IFM, IVV-VS-NIF, craman spectoscopy, and fluorescence analysis of various excitations wavelengths.
