Inis Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laseracibed's by International Gemological Institute (GB). A LGD has assentially the Chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. Isl utilizes the most advanced techniques and equipment currently evalidate including, binocular microscopes, admand color masters, non-contact-optical measuring device, a wide range analytical techniques including Tills. UTV/SNIR, Cmann spectroscopy, and fluorescopes, all considerations are considered to the color of th
