This Laboratory Grown Dlamond (LGD) described in this Report has been analyzed, graded and Laserscibed® by international Gemological institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mired diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high temperature) growth processes and may include post growth modifications to change the color. (GI utilizes the most advanced techniques and equipment currently valiable including, binocular microscopes,

Leurs are riplicatly produced by CVC (clientical volgen depusition) or by him finiting pressule high temperature) growth processes and may included post growth modifications to change the color. IG fullizes the most advanced techniques and equipment currently available including, binocular microscopes, adamand color masters, non-contact-optical measuring device, a vide range enablical techniques including FIIR, UV-UIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor approisal and by making the report IGI does not agree to purchase or replace the article.
