This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laersacribed's pin International Gemological Institut (GiO). LGD has assentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are hypically produced by CVD (chemical vapor deposition) or by HPHI (high pressure high temperature) growth processes and may include post growth modifications to change the color. Glu tillizes the most advanced techniques and equipment currently available including, binacular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIRI, UV-VIS-NIR, raman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor approssal and by making the report liGl does not agree to purchose or replace the article.
