This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Labersched¹/₂ by International Gemological Initiute (LG). A LGb has sessifially the chemical, physical and aprical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently variable including. Linocular microscopes, alamond color maters, non-contact-optical measuring device, a wide range analytical techniques including FIII, UV-VIS-NIR, Uv-man spectroscopy, and fluorescence analysis at various excitation avaelengths. This Report Includes advanced security features. This Report is neither a guarantee, valuation or appraisal and by making the report IGI does not agree to purchase or replace the articles.
