This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Lasersched<sup>1</sup> go International Gernological Initiule (GA). I LGD hes sessifially the chemical, physical and aprical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including. Disocular microscopes, alamond color masters, non-central-topilcal measuring device, a wide range analytical techniques including FIIR, UV-VIS-NIR, UV-man spectorecopy, and fluorescence analysis at various excitation availanghts. This Report Includes advanced security features. This Report is neither a guarantee, valuation or oppravisal and by making the report IGI does not agree to purchase or replace the article.
