Comments: As Grown - No indication of post-growth treatment. This Laboratory Grown Diamond was created by High Pressure High Temperature (HPHT) growth process.	

Type II

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscitade⁹ by International Gemological Initiute (LG). A LGO has sessifially the chemical, physical and aplical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including. Disocular microscopes, alamond color masters, non-contact-opilcal measuring device, a wide range analytical techniques including FIIR, UV-VIS-NIR, UV-man spectoscopy, and fluorescence analysis at various excitation availangths. This Report Includes advanced security features. This Report is neither a guarantee, valuation or opprivation dub y making the report IGI does not agree to putches or replace the articles.
