This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Loserscitade⁹ by International Gernological Initiute (LG). A LGO has sessifially the chemical, physical and aplical properties as a mined alamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. IGI utilizes the most advanced techniques and equipment currently available including. Disocular microscopes, alamond color masters, non-contact-ophical measuring device, a wide range analytical techniques including FIIR, UV-VIS-NIR, UV-man spectorcocyp, and fluorescence analysis at various excitation availanghts. This Report Includes advanced security features. This Report is neither a guarantee, valuation or oppraisal and by making the report IGI does not agree to purchase or replace the articles.
