This Loboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Lossracined's by International Germological Intitut (LGD). A LGD has assantially the chemical, physical and optical properties as a mined diamond, with the exception of being mon-mode (a manufactured product). LGDs are hypotally produced by CVD (chemical vapor deposition) or by IHPH (high pressure high temperature) growth processes and may include post growth modifications to change the color. Glutillizes the most advanced techniques and equipment currently available including, binocular microscopes, diamond color masters, non-contact-optical measuring device, a wide range analytical techniques including. FIRI, UV-VIS-NIC, arman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor approisal and by making the report (Gl deep not gare to be not gare to such option or opposition and by making the report (Gl deep not gare to protective or reports).
