This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed⁹ by International Gemological Institute (GA). LGD has sessentially the chemical, physical and aplical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are typically produced by CVD (chemical vapor deposition) or by HPH (high pressure high temperature) growth processes and may include post growth modifications to change the color. [GI utilizes the most advanced techniques and equipment currently available including. Linocular microscopes, alamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIIR, UV-UIS-NR, Uranna spectroscopy, and fluorescence analysis at various excitation available microtador his Report Includes advanced security features in his Report Includes advanced secniques of age to fautures or teques or the articles arctitation and and by making the report [GI does not age to fautures the articles arctitation arc appraviation do by making the report [GI does not age to particles or replace the article.
